“40

YEARS AGO Pantone filled a

much needed niche in the graphic design community with the invention of the PANTONE MATCHING SYSTEM®, a standard color system that enabled designers and printers to faithfully communicate and reproduce color easily anywhere in the world.

It has been Pantone's mission since to continually provide the most advanced, yet practical and affordable solutions for communicating and achieving accurate color. Today, our color products have expanded into the fields of color measurement devices, textiles, plastics, software and the Internet with Web color standards. We remain committed to listening to our customers, being at the forefront of emerging technologies and adhering to the strictest quality control measures in order to offer you products and services that meet or exceed your expectations.”

Richard Herbert
President, Pantone, Inc.

Printed in PANTONE Hexachrome®, this catalog illustrates both the dynamic color range and value derived from the process. Realize the savings that can be achieved by printing in the six PANTONE Hexachrome colors (CMYKOG). To learn more about Hexachrome®, see page 20.

PANTONE tints – the only tool for referencing tints of solid colors, halftones and line art

Take the guesswork out of tints! See the printed effects of tinting before going to press.

What will a 40% tint of PANTONE 7496 C look like when printed? Preview tints of 1,113 solid PANTONE Colors. Each set includes: ■ Eight (8) tints of each solid PANTONE Color ■ One (1) halftone ■ Color as type ■ Black type effect ■ Reverse type effect ■ Color type surprint. One set each for coated and uncoated stock.

What is the lowest tint percent that will legibly hold knock-out type? It depends on the color. Now decide with confidence knowing exactly what it will look like on press.

At what tint percentage does black type become unreadable? The black label on each tint lets you see for yourself the best tint for black text.

“Many of my clients budget for four-color printing, believing they can match spot colors in specific areas, i.e., their logo or corporate colors. The PANTONE solid to process guide provides a firsthand reference for solid color conversion. Clients can view PANTONE Color choices while also checking how they will print in four-color process.”

Laura Powers, Owner, Harvest Graphics, PA

solid to process guide

IT DOESN'T HAVE TO BE A SOLID TO LOOK LIKE ONE!

Now you can accurately specify process color using authentic 4-color process chips.

We're not talking about the PANTONE MATCHING SYSTEM Colors. This is a completely unique PANTONE System designed exclusively for working in CMYK. The two-book set consists of: ■ 3,000 colors on coated stock ■ Screen tint percentages ■ Four (4) removable chips of each color. Ideal for attaching to artwork or digital files!

PANTONE process chips coated

Camellia

fashion and home color guide

"We ordered the PANTONE PLASTICS transparent selector and were able to start using the System right away, immediately integrating it into our workflow."

Peggy Riel, crystal design consultant for Lenox, NJ

LENOX[®]

Gifts That Celebrate Life.

"Our vice president of sourcing had heard of the PANTONE PLASTICS Color System™, and our senior design did a little research. We were already using the PANTONE MATCHING SYSTEM for dinnerware and thought we'd give the Plastics System a try.

"The way color matching is traditionally done in this business is to find any sort of clear color reference, such as a glass bowl, and smash it into pieces. Fragments are then sent to overseas contractors. It's a very time consuming process because you have to go out and find the perfect reference piece.

"The PANTONE PLASTICS Color System is a much more efficient system for the whole industry. **We match one of the chips to the color we need, then order multiple chips in that color to send to our manufacturers all over the world.** This makes it easier for us to show people what we need and saves time. We can even send chips to the people making our acrylic prototypes."

Lenox uses the System to specify colors for stemware, crystal chargers, glass salad plates and bowls. "We are using a lot of blues and earth tones, as well as many shades of red and green for holiday. There are enough colors in the PANTONE PLASTICS Color System to find accurate matches. It's been a good system for us."

PANTONE for plastics

PANTONE®
7407 C

opaque selector

Finally... more accurate color communication, exclusively for plastics. Get the color you want faster! Our plastic chips simulate the unique color characteristics of plastic including opacity, translucency and texture. **Your suppliers will match color faster and easier** – these chips are achievable colors supported by an international network of licensed colorant suppliers and master batchers. The opaque selector includes over 900 cross-references to the PANTONE MATCHING SYSTEM and PANTONE Textile Color System.

The complete set includes: ■ 735 transparent colors ■ 1,005 opaque colors ■ Over 900 cross-references to the PANTONE MATCHING SYSTEM and PANTONE Textile Color System ■ Three-ring binder. Or create your own custom palette and purchase individual chips separately. Each color chip is molded in 1, 2 and 3 mm thickness levels. All chips have a gloss finish - opaque chips also include a matte finish.

solid to process guide

ACHIEVE SPOT COLOR WITH PANTONE HEXACHROME

Nearly 90% of solid PANTONE Colors are achievable in Hexachrome process, compared to only 50% in four-color process. The guide illustrated on the left displays solid colors printed in Hexachrome. The guide on the right compares solid colors to their four-color process reproductions.

ODWALLA hit the spots...

PANTONE®
7452 C

"For our labels, we were looking for an opportunity to save money over using spot color," stated Maude Martin, manager of creative services at Odwalla Inc. "Four-color wasn't going to produce the quality we were determined to achieve. A team member heard about Hexachrome and tapped Inland Printing for label production."

"With about 50 SKUs, Odwalla had to do 50 different press set-ups for short runs if they needed all 50 labels printed," related Roman Artz, national account manager at Inland Printing. ***"They wanted to use 10 to 14 spot colors but needed the efficiency of running a combination of labels on one sheet."***

"We converted all of Odwalla's PANTONE Spot Color artwork to Hexachrome using Pantone's HexWare® software and combined the SKUs, dramatically reducing the number of set-ups per order. Owing to the economies of scale, Odwalla can get the impact of spot colors with the efficiencies of running them in combination, resulting in a lower cost per 1,000 for their labels."

"PANTONE Hexachrome was a great solution, making our packaging more economically viable while maintaining integrity and color quality," Martin agreed. "It has been successful for us from a financial perspective, while its broader gamut helps distinguish our package on the shelf and fits with our goal of providing the utmost quality."
